#### Notes on Vital Statistics.

#### Live Births.

Live births during the year 1950 totalled 918, giving a rate of 15.8 per thousand of the estimated population, identical with that for England and Wales.

During the previous year births totalled 917, giving a rate of 15.4 per thousand of the estimated population.

#### Stillbirths.

Stillbirths totalled 23, or a rate of 0.39 per thousand of the estimated population, as against 25 stillbirths or a rate of 0.42 during the previous year.

#### Deaths.

Deaths during the year amounted to 798, or a rate of 12.6 per thousand of the estimated population, as against 739 deaths and a rate of 11.8 during the previous year. This shows an increase of 59 deaths or a rate of 0.8 during the year 1950.

#### Infant Mortality.

Deaths of infants under the age of one year numbered 31, making an infant mortality rate of 34, which is identical with that for the Great Towns; the rate for the whole of England and Wales is 30.

The infant mortality rate during 1949 was 39, and the rate of 34 during 1950 thus represents an appreciable reduction in infant mortality during the year.

Deaths of infants during the first four weeks of life amounted to 24, the neo-natal mortality rate being 26.

## Maternal Mortality.

There was one maternal death during the year. This gives a maternal mortality rate of 1.06 per thousand live and still births, and is the first maternal death to be recorded in the Borough since 1947.

List of causes of Death in the Borough during the year 1950.

#### SECTION 2

# General Provision of Health Services in the Area HOSPITALS.

There is only one small general hospital in the Borough, but patients requiring hospital treatment, including those suffering from infectious disease, are admitted to other hospitals in adjoining areas.

No difficulty has been experienced in securing the prompt removal of infectious cases, and in general there has not been excessive delay in obtaining beds. The old "chronic sick" patient, however, presents a serious problem. Crowded hospitals are naturally reluctant to admit such cases, and much hardship is thereby caused, not only to the sufferers, but to their relations and friends. The changing agestructure of the population is likely to accentuate this difficulty in future years.

Ambulance Facilities.

The Lancashire County Council are now responsible for all Ambulance facilities in the Borough. During the year, modern, elaborately equipped vehicles have been in use and staff expansion has taken place; these changes have been reflected in the satisfactory service given to a greatly increased number of patients.

#### CLINIC AND TREATMENT CENTRES.

School and Maternity and Child Welfare Services are now provided for the Borough by the Lancashire County Council, and administered locally by a Divisional Health Committee, in which Crosby has six representatives.

Clinics are held as follows:—

#### MATERNITY AND CHILD WELFARE

- 1. Ante-Natal and Post-Natal Clinics.
  - (a) Waterloo Clinic, Prince Street, Waterloo. Wednesday afternoons.
  - (b) Seaforth Clinic, Cecil Road, Seaforth.
    Monday afternoons.
  - (c) Crosby Clinic, Alexandra Hall, Crosby, Friday afternoons.
- 2. Child Welfare Clinics.
  - (a) Waterloo Clinic, Prince Street, Waterloo. Monday and Wednesday afternoons.
  - (b) Seaforth Clinic, Cecil Road, Seaforth. Tuesday and Wednesday afternoons.
  - (c) Crosby Clinic, Alexandra Hall, Crosby. Tuesday and Thursday afternoons.
  - (d) Moorside Clinic, Moorside Park Pavilion, Moorside Road, Crosby.

    Monday afternoons.

#### 3. Vaccination Clinic.

Waterloo Clinic, Prince Street, Waterloo. Friday afternoons.

#### 4. Immunisation Clinic.

- (a) Waterloo Clinic, Prince Street, Waterloo. Alternate Friday afternoons.
- (b) Alexandra Hall, Crosby. Alternate Friday afternoons.

#### 5. Artificial Sunlight Clinic.

Waterloo Clinic, Prince Street, Waterloo. Tuesday mornings and Friday afternoons.

## SCHOOL MEDICAL SERVICES.

#### 1. Minor Ailments Clinic.

- (a) Waterloo Clinic, Prince Street, Waterloo. Every morning—treatment. Friday morning—Doctor's consultation.
- (b) Seaforth Clinic, Cecil Road, Seaforth.
  Monday, Wednesday and Friday mornings—
  treatment.
  Monday morning—Doctor's consultation.
- (c) Alexandra Hall, Crosby.
  Thursday morning—Doctor's consultation.

### 2. Dental Clinic.

- (a) Waterloo Clinic, Prince Street, Waterloo.
- (b) Alexandra Hall, Crosby.

  Full-time staff in attendance, by appointment, at both centres.

# 3. Orthodontic Clinic

Waterloo Clinic, Prince Street, Waterloo. Thursday mornings.

# 4. Ophthalmic Clinic

Waterloo Clinic, Prince Street, Waterloo. Monday afternoons and Wednesday mornings.

HEALTH SERVICES

- 5. Ear, Nose and Throat Consultant Clinic.
  - (a) Waterloo Clinic, Prince Street, Waterloo.

    Mornings of second and fourth Tuesdays in each month.
  - (b) Waterloo Hospital.
    Operations when necessary.
- 6. Artificial Sunlight Clinic.

Waterloo Clinic, Prince Street, Waterloo. Tuesday mornings and Friday afternoons.

7. Orthopaedic Clinic.

L.C.C. Clinic, Linacre Road, Litherland. Thursday mornings.

8. Orthoptic Clinic.

Waterloo Clinic, Prince Street, Waterloo.

Monday and Thursday mornings and afternoons.

Tuesday afternoons and Wednesday mornings.

#### OTHER SERVICES

9. Tuberculosis Clinic.

The Dispensary, "Ellesmere," Crosby Road N., Waterloo. By appointment.

- 10. Venereal Disease Clinics.
  - (a) Bootle General Hospital, Derby Road, Bootle.
  - (b) Liverpool Hospitals.

Miscellaneous 13

#### BACTERIOLOGICAL WORK

All specimens requiring bacteriological examination are submitted to Professor Robinson, City Bacteriologist, City Laboratories, Liverpool.

#### WATER SUPPLY

The Liverpool Corporation supply the whole of the Borough with water excellent in quality and adequate in quantity, drawn chiefly from Lake Vyrnwy in North Wales. All houses are served from the public mains.

The water is purified by slow sand filtration, and afterwards treated with chlorine. Samples are regularly examined by the Liverpool City Bacteriologist, with uniformly satisfactory results.

No difficulties due to plumbo-solvent action have been experienced:

#### SCAVENGING

This work is carried out by Corporation workmen under the supervision of a Cleansing Superintendent directed by the Borough Engineer.

The main roads are cleansed daily, other roads at less frequent intervals—at least once weekly. The district is therefore kept in a clean and tidy state, the whole of the 77 miles of roads with their passages receiving regular attention. A mechanical street-sweeper and gully-emptier are now in use.

# NATIONAL ASSISTANCE ACT, 1948—Section 47.

With the co-operation of Medical Practitioners in the district, it has been possible to secure the removal of all cases found to be in need of care and attention, without recourse to the procedure laid down in Section 47 of the Act.

# LANCASHIRE COUNTY COUNCIL (RIVERS BOARD AND GENERAL POWERS) ACT, 1938

Sections 115 and 116 of this Act, which came into operation on the 1st of April, 1939, have been adopted by the Corporation and were administered during 1950. All persons and premises classified under the provisions of these sections of the Act have been visited and the Inspectors reports show that a satisfactory standard of cleanliness is being maintained.

These Sections provide for the registration of:-

- 1. Hawkers of Meat, Fish, Fruit and Vegetables, and of their premises (if any) for the storage of such goods.
- 2. Premises used in connection with the manufacture, sale or storage of ice cream, excluding cinemas and restaurants.
- 3. Premises used in connection with the manufacture of sausage, potted, pressed, pickled or preserved meat, fish or other food intended for sale.

#### ICE CREAM

All premises at which ice-cream is manufactured or sold were regularly inspected, 410 visits being made during the year.

In addition, 101'samples were taken for bateriological examination. These samples were submitted to a methylene blue reduction test, and divided into four grades, in accordance with a provisional grading system recommended by the Ministry of Health. As a working basis, the Ministry have suggested that 50% of the samples from any one source should fall into grade 1, 80% into grades 1 and 2, and none into grade 4. No claims for the infallibility of this test are made by the Ministry, but it forms a useful adjunct to regular inspection, and helps the Sanitary Inspectors to concentrate their efforts on endeavouring to improve the technique of the less satisfactory producers and retailers.

#### MEAT AND OTHER FOODS

The inspection of food premises is carried out by the Sanitary Inspectors, all of whom possess the necessary qualifications. Shops, vehicles and premises where food is prepared, stored, conveyed or sold are kept under constant supervision.

In carrying out this work the following inspections were made:

Butcher's Shops, 195 inspections.

Other Food Shops, Vehicles and Premises, 810 inspections.

There was one prosecution under Sec. 9 of the Food and Drugs Act. A retailer in whose possession meat pies unfit for human consumption were found was fined £10 and ordered to pay costs.

Bye-laws made under Section 15 of the Food and Drugs Act, 1938, for securing the observance of (sanitary and cleanly practices and conditions in connection with the handling, wrapping and delivery of food and sale of food in the open air were adopted by the Council on 3rd May, and approved by the Ministry of Health on 26th July. The Sanitary Inspectors visited all premises in the Borough where food is prepared or sold, explained the provisions of the bye-laws, and left copies with the proprietors.

#### MILK SUPPLY

There are in the Borough 14 Cowkeepers, 11 'dairymen,' and 14 dealers in bottled milk. Milk is also sold retail in the Borough by 7 Cowkeepers and 4 processors from other districts.

The visits of inspection made during the year numbered 206. Of 102 samples of milk taken in the Borough and submitted for examination 1 or 0.9% of the total was found to contain tubercle bacilli. The Ministry of Agriculture and Fisheries were notified, and an examination of the herd was subsequently carried out by the Veterinary Inspectors of the Ministry. The animals found to be infected were removed and slaughtered.

# CLEANLINESS OF MILK SUPPLY.

The standard of cleanliness adopted by the Corporation is that prescribed by the Ministry. 147 samples of milk were submitted for bacteriogical examination during the year, and of these 115, or 78 per cent, reached the required standard of cleanliness; 28 were found to have B.Coli present in 1/100 c.c., and 32 failed to pass the methylene blue test.

Particulars of samples failing to reach the required standard were forwarded to the Chief Milk Production officer to the Lancashire Agriculture Executive Committee, and where the sample had been obtained from local dairymen, the dairies were specially visited also.

The following atricles of food, being unfit for human consumption, were voluntarily surrendered, and where necessary, destroyed. In certain cases, on the undertaking that it would not be used for human consumption, the food was returned to the wholesaler and utilised for other purposes.

# MILK (SPECIAL DESIGNATIONS) REGULATIONS, 1949

The Corporation granted 'dealers' licences to 36 purveyors of tuberculin tested milk, 34 purveyors of pasteurised milk and 5 purveyors of sterilised milk.

In addition, supplementary licences were granted to six purveyors of tuberculin tested milk, four purveyors of pasteurised milk, and one purveyor of sterilised milk, to retail within the Borough from dairies in neighbouring areas.

#### **BAKEHOUSES**

At the end of 1950 there were 34 bakehouses in the Borough, 3 of these being basement bakehouses. All bakehouses were inspected, and generally were found to be maintained in a clean and satisfactory condition, 65 visits being made during the year.

In several instances bakehouses were noticed to be in need of cleansing and limewashing, and on notifying the occupier the matter was promptly remedied. Various minor defects were noted and on intimation were subsequently rectified.

In accordance with the provisions of Section 54 of the Factories Act, 1937. Certificates of Suitability are in existence in respect of the three basement bakehouses.

#### SECTION 5

#### Prevalence and Control of Infectious Diseases.

#### GENERAL

During the year 1950, 1130 cases of infectious diseases were notified, and the corrected total of confirmed cases amounted to 1114. This figure shows an increase of 264 confirmed cases compared with last year's total of 850.

The subsequent table gives details of age groups, deaths, etc.

Four hundred and three visits being made by the Sanitary Inspectors for the purpose of investigating cases of infectious disease.

The Divisional Education Officer and principals of individual schools were notified of occurrences concerning school children, and the Public Libraries Department was informed of all cases.

#### SCARLET FEVER

There were 120 confirmed cases of scarlet fever, compared with 133 the previous year. 34 were removed to hospital; there were no deaths.

#### WHOOPING COUGH

155 confirmed cases of whooping cough were recorded, compared with 291 the previous year. Six of the cases had complications and were removed to hospital; there were no deaths.

#### DIPHTHERIA

There were no confirmed cases of diphtheria during 1950, as compared with 4 during 1949. No deaths from this disease have been recorded in the Borough since 1944.

#### **MEASLES**

There were 779 cases of measles recorded during the year, compared with 352 the previous year. Six of the cases were removed to hospital; no deaths were recorded.

#### POLIOMYELITIS

There were 6 confirmed cases during the year, compared with 6 the previous year. All the cases were removed to hospital; there were no deaths.

#### ENCEPHALITIS

During the year one case was notified, and removed to hospital. No deaths were recorded.

#### DISINFECTION

Disinfection was carried out at premises where infectious diseases occurred, and during the year 411 houses were treated. In addition, 3,227 articles of clothing, bedding, etc., and 588 library books were removed from such houses and treated at the disinfecting station.

# SECTION 6.

#### **Immunisation**

#### DIPHTHERIA

The facilities for immunisation against Diphtheria which have been available to residents for several years were continued by the Lancashire County Council during 1950.

The prophylactics used were supplied by the Ministry of Health.

For young children, the method of treatment adopted consists of two injections of A.P.T. at an interval of one month, the first injection being 0.2 c.c., and the second 0.5 c.c. For older children and adults, three injections of T.A.F., each of one c.c., are administered at fortnightly intervals.

#### Immunisation Statistics

	Under 5 yrs.	5-15 yrs.	Total

#### SECTION 7.

#### Tuberculosis.

In accordance with the Public Health (Tuberculosis) Regulations 1930, 111 new cases were notified during the year. 103 were pulmonary and the remaining eight were non-pulmonary cases.

During the same period 35 deaths were recorded, and these cases were removed from the register.

Details of new cases and deaths are given in the table below.

Comparative figures for 1949, namely, 105 new cases notified and 32 deaths, indicate an increase in the incidence of this disease during 1950.

In pursuance of the provisions of the regulations, particulars of all cases falling withing the specified age groups were sent to the County Medical Officer of Health for transmission to the Ministry of Labour and National Service.

The Liverpool Regional Hospital Board are responsible for the diagnosis and treatment of tuberculosis within the Borough, while after-care services are provided by the Lancashire County Council. Good co-operation exists between this Department and the local Chest Clinic.

#### SECTION 8

Shops Acts, 1912 to 1938, and the Young Persons (Employment) Act of 1938 (Part 1) (Consolidated by the Shops Act, 1950).

The routine inspection of shops under the above Acts was continued during 1950. A total of 796 inspections were made during the year, and defects and contraventions discovered were referred to the persons responsible. These matters received prompt attention and were dealt with informally. At the end of the year there were 943 occupied shops on the register; there are very few empty shops in the area.

During the year the Shops Act, 1950, was introduced. Consolidation and amendment of the law relating to shops has long been advocated and it was hoped that the deliberations of the Gowers Committee, whose final report was published in March, 1949, would have resulted in new legislation free from existing deficiencies and anomalies. However the new act is a consolidating measure only and makes no change whatever in the existing law. Presumably the more thorny problems of amendment have been postponed to some future date.

The majority of shops continue to close much earlier than the statutory closing hour. The restrictions on evening trading imposed each winter during and since the war and due to end in 1950 have been continued in force for a further period by an Order-in-Council.

As in previous years, so also in 1950, several complaints were received from indignant shopkeepers regarding the inequity of a system which burdens them with heavy rates and restricts their trading hours, whilst allowing street vendors to bring their wares into the district and to trade to whatever hour they choose without contributing to the local finances in any way. Local authorities, however, due to a defect in the law, have no control over the trading hours of street vendors and the position will remain unsatisfactory until the law is amended. This matter was the subject of a recommendation by the Gowers Committee.

As indicated in last year's report several traders, through the local Chamber of Trade, did approach the Corporation seeking orders under the Shops Act, 1912, and the Shops (Sunday Trading) Act, 1936, which would permit certain transactions (e.g. the sale of buckets,

spades and other toys) on the weekly half-holiday and on Sundays during the summer months. After careful consideration it was decided that no action be taken in the matter.

Once again contraventions against legislation concerning closing hours were almost wholly confined to small general shops where the proprietor usually lives on the premises and is the only person engaged in the business.

At such shops a wide variety of articles may be sold and several differing closing hours might apply. One can well imagine the bewilderment of a would-be purchaser who enters such a shop to find that whilst he can purchase certain goods lawfully, others plainly visible upon the shelves he cannot have. The temptation to which the shopkeeper is subjected is obvious. Fortunately since the last war a number of small general shops have closed for the weekly half holiday and also on Sunday and this is the best solution to the problem. In some instances shopkeepers have chosen this course in preference to remaining open and having to refuse customers prohibited articles

#### SECTION 9

## Factories Act, 1937 and 1948

# INSPECTIONS for purposes of provisions as to health

Total	26	26	_	1	-	

#### HOME WORKERS

Occupiers of factories from which work of certain kinds is given out are compelled to keep a list of outworkers employed by them, and to send a copy of the list to the Local Authority in February and August of each year. Such lists were received relating to seven outworkers, all engaged in the making of wearing apparel.

The home workers were visited on each occasion and the premises found to be satisfactory.

#### INSPECTION OF THE DISTRICT

During the year 6,008 premises in the Borough were inspected.

To secure the abatement of nuisances found during these inspections, 1,734 preliminary notices were served upon owners and occupiers. Cases in which these notices were not complied with were reported to the Health Committee, upon whose order 514 statutory notices were served.

Premises were visited while work was in progress with the object of ensuring that the nuisances were satisfactorily abated, the number of such re-inspections being 5,843. 4,978 nuisances were discovered and 4,526 abated during the year.

There were six prosecutions for failing to comply with statutory notices under the Public Health Act, 1936. Two of the defendants were ordered to execute the necessary work and to pay a fine and costs. In two cases where the work was done before the hearing of the case the defendants were ordered to pay costs and in the remaining cases the summonses were withdrawn.

Intimations were sent to the Borough Engineer's Department on 221 occasions regarding the following matters noted during inspections of the district.

Charad or damaged gullies and sewers	135
Choked of damaged games and some	34
Defective paving and pathways	21
Removal of refuse and debris	19
Dangerous walls and buildings	8
Defeate at public conveniences	3
Nuisances arising from watercourses	1

#### **OVERCROWDING**

Though the Council have continued their efforts to relieve overcrowding by re-housing the most urgent cases, the day is probably far distant when this very serious evil will no longer be a source of anxiety.

## OFFENSIVE TRADES AND FISH FRIERS

There are no premises in the Borough at which offensive trades are carried on.

There were 27 fish frying establishments on the register at the end of 1950. 46 visits of inspection were made during the year and in all cases the premises were found to be maintained in a clean and satisfactory condition. Minor matters discovered in inspection were all remedied informally.

#### REMOVAL OF HOUSE REFUSE

This work is carried out under the direction of the Borough Engineer and supervised by the Cleansing Superintendent.

The removal of household refuse throughout the Borough is effected by means of mechanised vehicles. In Little Crosby Village, where the closet and refuse accommodation is mainly of the privy midden type, the middens are emptied by corporation workmen, and local farmers remove the refuse on to the land for manure.

Ashbins and pail closets are emptied weekly, and privy middens at intervals of approximately two months.

Shop refuse is removed twice weekly by means of a covered motor vehicle, and the charge for collection is 6d. per bin after one free bin.

The Corporation dispose of the refuse by controlled tipping.

During the year a total of 16,900 tons of refuse was collected and removed.

341 tons of salvage was collected during the year.

#### STREAMS AND WATERCOURSES

The streams and ditches are cleansed and bottomed by their respective owners, and receive frequent inspection.

With the spread of new houses into the rural area, the task of keeping ditches clear becomes more difficult each year, and constant supervision is necessary.

#### DRAIN CLEARING

The scheme whereby the department will attempt to cleanse obstructed drains by simple methods for a modest fee was continued during the year. Since the inception of the service in 1947, over 300 drains have been cleared. The work is usually done within a few hours of a request being received and this prompt and inexpensive service has manifestly been most useful to residents.

#### SMOKE ABATEMENT

There are six factory chimneys in the Borough, four laundries, one large mail order stores, and one small electrical engineering company.

There are no Bye-laws in force under the Public Health (Smoke Abatement) Act, 1926, or the Public Health Act, 1936.

A standard deposit gauge designed to measure atmospheric pollution was set up on the Town Hall roof on 1st July. As will be seen from the table given below, the readings show wide casual variations, and it will be some years before a fair average figure for the pollution in this part of the Borough can be given.

		Deposit
Month	Rainfall (ins.) (to	ons per sq. mile)
July	2.50	18,75
August	6.22	23.44
September	4.99	61.16
October	2.35	24.60
November	4.28	22.81
December	4.08	25.64

#### CINEMAS

There are seven cinemas in the Borough. All were inspected and found to be well conducted.

#### VERMIN-INFESTED PREMISES

Where vermin are found, whatever treatment seems most appropriate is promptly applied. Bug-infested dwellings are liberally sprayed with a solution of 5%, D.D.T. in paraffin. Bedding is removed before spraying commences, treated with high pressure steam, and returned, aired and ready for use, on the same day. Flies, fleas and moths are dealt with by a lighter spraying with the same insecticide, or by the dissemination of insecticidal smokes in the affected rooms. Cockroaches, ants and 'silverfish' are combated by the use of a mixture of 10%, D.D.T. in an inert powder. This has proved effective, and has the advantage of being almost odourless

There has been a welcome dearth of crickets this year, but an unusual number of houses have been infested by ants. Fortunately the modern insecticides, with their residual effect, have proved successful when used against these insects. It is very doubtful whether all are killed, but they certainly avoid treated premises for a long time afterwards.

Special precautions are taken to guard against the risk of buginfestation in Corporation houses. The dwelling and effects of every prospective tenant are minutely examined by the Sanitary Inspectors, and if the least trace of infestation is found, the furniture is fumigated with hydrogen cyanide during removal. This work is carried out by contractors in the employ of the Council. At the same time, bedding, etc, is treated by high pressure steam in the Corporation's Disinfector.

All complaints received regarding infestation were investigated, and bugs were found in the following premises:—

Council Houses, 22. Other Houses, 189.

142 visits of inspection were recorded under this heading during the year, and 211 premises were disinfested on account of infestation by fleas, moths, cockroaches, ants, 'silverfish' and wasps.

#### TENTS, VANS AND SHEDS

There are no temporary dwellings in the Borough.

#### PREVENTION OF DAMAGE BY PESTS ACT, 1949

All premises in the Borough where rodent infestations were found or reported have been treated by the rodent operative, who made 3,497 visits during the year.

The methods recommended by the Ministry of Agriculture and Fisheries are usually employed, and have proved very successful, but it is still occasionally necessary to use dogs and ferrets in the outlying agricultural areas.

Sewers in the Borough have been treated twice during the year for the presence of rats. The table below sets out the result of the treatments.

			1st Treatment	2nd Treatment
Number of			460	455
>> >>		showing pre- bait 'take'	119	71
>> >>	>>	showing complete 'take'	81	52
» »	,,	showing par- tial 'take'	38	19
>> >>	>>	showing bait untouched	341	384

# PUBLIC ELEMENTARY SCHOOLS

At the end of 1950 there were 19 Public Elementary Schools in the Borough. The names of all children who are excluded from school on account of infectious disease in their homes are notified to the Education Department, and the Head Teachers are also informed.
